

## Improved XT Air Cleaner

Model year 2015 XT650 and XT675 engines are being built with a redesigned air filter element, base, and cover that will improve the cover security. The new style cover can be identified by the two latches to secure it closed, as opposed to the single latch of the previous design.

**New Style Cover**

**Dual Latches**

**Old Style Cover**

**Single Latch**

The new style air filter element can be identified by the blue sealing gasket and the addition of a mesh screen to the air filter. The previous filter design will have an orange sealing gasket and no mesh screen.

NOTE: These filters are NOT interchangeable. The correct filter must be used for each style of air cleaner.

**New Style Filter Element**

**Previous Style Filter Element**

If replacing the old style air cleaner with the new design, order kit number 14 743 03-S. Be certain that the air filter element part number decal is affixed to the top of the air cleaner base, as shown in the photo below, to identify that the engine has had the new style air filter installed.
